DETAILED ACTION

Allowable Subject Matter

Claims 9-23 are allowed.

The following is an examiner's statement of reasons for allowance: The applicant argues, "The claimed invention is based on the above findings and the claims as amended require all of the following three elements: (a) polyethylene terephthalate (PET) film as heat resistant substrate; (b) an elastic layer comprising elastic material having a hardness less than HA40; and (c) a recording material having a finely roughened surface with raised portions having a height of 5-20 um and a pitch of 50-500 um. This combination of features is not shown or suggested in the cited art..." As previously mentioned, the examiner agrees with these arguments. Each of the three elements is individually known to one of ordinary skill in the art. However, the examiner cannot find proper motivation to combine the art that teaches these elements. The current state of the law demands that merely possessing art that teaches the individual elements of a claimed invention is not enough; there must be some teaching, suggestion, or motivation in the prior art that would lead one of ordinary skill in the art to combine these individual elements. The examiner could not find this motivation. The examiner would like to note however, that the Supreme Court has recently agreed to hear the case of KSR International Co. v. Teleflex. The outcome of this case may change the state of the law. As it stands now, this case is allowable for the above reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
